00825-0300-4809

Table 2 in the Flange-Lok and Pak-Lok QIGs indicate the sensor size codes to be T1, T2, T3. This is incorrect. The correct sensor size codes are simply 1, 2, and 3. As such, the table should be as follows:

Sensor Size / Hole Diameter Chart		
Sensor	Diameter	
1	3/4-in. (19 mm)	+ 1/32-in (1 mm) - 0.00
2	1 ⁵ / ₁₆ -in. (34 mm)	+ 1/16-in. (1 mm) - 0.00
3	2 ¹ / ₂ -in. (64 mm)	+ 1/16-in. (1 mm) - 0.00

In the product model number, a series of characters may indicate a T1 code. This code refers to the mounting type and should not be confused with sensor size. There are two methods of determining the correct sensor size.

1. Refer to the model number.
 - If the first seven digits in the model number are 3051SFA, refer to the eighteenth digit in the model string
 - If the first seven digits in the model number are 3095MFA, refer to the seventeenth digit in the model string
 - If the first three digits in the model number are 485, refer to the thirteenth digit in the model string

Use this digit to determine the corresponding sensor size.

- If the digit is 1, the Annubar is Sensor Size 1
 - If the digit is 2, the Annubar is Sensor Size 2
 - If the digit is 3, the Annubar is Sensor Size 3
2. Measure the width of the Annubar[®] Sensor.
 - If the width is 0.590-in. (14.97 mm), the Annubar is Sensor Size 1
 - If the width is 1.060-in. (26.92 mm), the Annubar is Sensor Size 2
 - If the width is 1.935-in. (49.15 mm), the Annubar is Sensor Size 3
